## Site no.: B4

**Site name:** Boat of Garten and Tore Hill

**Grid reference:** [NH 92536 18550]

**Locality:** Strathspey, between Laggantygowan and Tore Hill.

**GCR Status:** N/A

**GCR No.:** N/A

**Type:** Natural exposures

**Description:** Scattered outcrops of grey granodiorite and granite belonging to the Boat of Garten and Tore Hill intrusions.

**Justification:** These two small masses are poorly exposed and have not been studied in detail, however their lithology (largely biotite-hornblende granodiorite) and certain geochemical characteristics suggest they belong to the Argyll–Northern Highlands Subsuite; if so, they are the only representatives of that suite in the park.
